

*March 2016, Bandung*

# Risk Mitigation

Pre-workshop ITB

# Portfolio management

# Risk mitigation programs

It is also necessary to design programs to reduce risks during the exploration phase:

- In Mexico, energy reform allowed the national electricity company (CFE) to partner with the private sector to reduce the financial exposure that both had faced in the exploration phase.
- To stimulate private sector investment in geothermal technology in Mexico and Chile, loans convertible to grants, seed loans, and financing at low interest rates are available. All this is offered through the support of the Clean Technology Fund, the Inter-American Development Bank, and the Government of Mexico.

# Mitigation measures

- [Discuss for each project phase]
